

CHINA GROWTH ROADMAP

From RMB 0 to RMB 150M ARR

A detailed, China-only scaling plan for Lulu Growth OS based on an annual price of **RMB 30,000 per customer / factory**. This version is intentionally more detailed and uses a **36-month horizon**, because RMB 150M ARR requires very different execution logic than the earlier RMB 10M roadmap.

Market: China only

Price: RMB 30,000 / year

Target: RMB 150,000,000 ARR

Horizon: 36 months

EXECUTIVE SUMMARY

At **RMB 30,000 ARR per customer**, Lulu needs **5,000 active paying customers** to reach **RMB 150M ARR**. This is not a broad self-serve SaaS story. It is a focused industrial GTM strategy built around **vertical packaging, factory groups, regional clusters, annual prepay, partner channels, and land-and-expand execution**.

Core Math

ANNUAL PRICE

30,000

RMB per customer / factory

TARGET ARR

150M

RMB recurring revenue

CUSTOMERS NEEDED

5,000

active paying customers

ANNUAL NET ADDS

1,667

per year on average

MONTHLY NET ADDS

139

per month on average

RMB 150M ARR is possible only if Lulu scales through repeatable industrial demand generation, not through one-by-one custom consulting sales.

Strategic Assumptions

PRICING

- Annual contract only
- RMB 30,000 base package
- No monthly-first model
- Optional onboarding fee recommended

ICP

- export-driven manufacturers
- mid-size and large factory groups
- companies with multiple sites or brands
- digitally ambitious owners / GMs

PRIMARY WEDGE

- international lead generation
- SEO / GEO / AEO visibility
- website + publishing automation
- AI-enabled growth operations

ROUTE TO SCALE

- regional cluster strategy
- channel partners and integrators
- group deals and multi-site rollouts
- case-study-driven expansion

Milestone Model by Stage

STAGE	TIMING	NEW CUSTOMERS	TOTAL CUSTOMERS	TOTAL ARR	MAIN OBJECTIVE
Stage 1	Months 1-6	50	50	RMB 1.5M	Validate packaging, close pilots, build first proof
Stage 2	Months 7-12	200	250	RMB 7.5M	Build repeatable outbound and first channel engine
Stage 3	Months 13-18	500	750	RMB 22.5M	Scale within verticals and regional clusters
Stage 4	Months 19-24	1,250	2,000	RMB 60M	Shift from sales motion to scaled rollout motion
Stage 5	Months 25-30	1,500	3,500	RMB 105M	Compound via referrals, partners, and multi-site expansion
Stage 6	Months 31-36	1,500	5,000	RMB 150M	Hit scale target with stronger retention and expansion quality

Detailed Roadmap by Phase

PHASE 1

**0 ->
1.5M**

Months 1-6

- **Choose one beachhead vertical:** for example export-focused manufacturers with English websites and overseas demand goals.
- **Turn Lulu into a clear offer:** not "AI software", but "AI growth system for export manufacturers".
- **Founder-led sales:** close the first 50 customers directly or very close to the founder.
- **Create 5 proof assets:** before/after case studies, live dashboards, visible search wins, faster content publishing, measurable lead improvements.
- **Build a low-friction onboarding motion:** if setup is too manual, later scale will break.

PHASE 2

**1.5M ->
7.5M**

Months 7-12

- **Standardize the sales engine:** ICP list building, outreach scripts, demo narrative, proposal template, annual prepay enforcement.
- **Open 2-3 channel motions:** website agencies, export consultants, B2B digital operators, industrial SaaS resellers.
- **Focus by cluster, not by country-wide spray:** Shenzhen, Dongguan, Foshan, Ningbo, Suzhou, Wuxi, Qingdao, and Guangzhou are more practical than "all of China".
- **Reach 250 total customers:** this is the first proof that demand is not purely founder-dependent.
- **Track the right metrics:** demo-to-close, onboarding time, activation rate, 90-day retention, partner-originated pipeline share.

PHASE 3

**7.5M ->
22.5M**

Months 13-18

- **Double down on what closes fastest:** one vertical can become 60-70% of revenue early, and that is fine.
- **Expand from single-site wins to group wins:** one signed manufacturing group should turn into multiple factories and brands.
- **Turn case studies into a growth system:** WeChat content, founder talks, cluster events, private industry circles, direct introductions.
- **Reach 750 total customers:** this is where operational efficiency becomes as important as raw selling.

PHASE 4

**22.5M -
> 60M**

Months 19-24

- **Start a structured customer success layer:** renewals, expansion, deeper adoption, and proof collection.
- **Switch from "sell product" to "roll out program":** a cluster-level and partner-led implementation model becomes necessary.
- **Build a stronger mid-market team:** regional sales leads, partner managers, onboarding managers, customer success managers.
- **Reach 2,000 total customers:** now Lulu begins to look like an industrial platform rather than an early-stage product.
- **Protect quality:** poor onboarding or weak activation here will create later churn cliffs.
- **Measure expansion revenue explicitly:** group-level upsells, additional sites, and broader automation packages.

PHASE 5

**60M ->
105M**

Months 25-30

- **Compound growth through channels:** at this stage, partners and referrals should generate a meaningful share of new business.
- **Vertical playbooks should now be productized:** each new factory should not feel like a custom project.
- **Reach 3,500 total customers:** which means selling scale and operational trust, not just features.
- **Strengthen retention reporting:** logo retention, gross revenue retention, expansion ARR, payback period.
- **Build board-grade data discipline:** because once numbers get large, credibility matters more than narrative.

PHASE 6

**105M ->
150M**

Months 31-36

- **Reach 5,000 active customers:** this is the direct numeric path to RMB 150M ARR at the current base price.
- **Retention now matters more than velocity alone:** if churn rises, the last stretch gets much harder.
- **Balance acquisition and account expansion:** new logos alone should not carry the whole final step.
- **Institutionalize partner governance:** enablement, revenue share, quality control, and renewal ownership.
- **Prepare next-step monetization:** higher-tier packages, add-ons, implementation fees, group contracts, and executive analytics.

Recommended China GTM Architecture

DIRECT SALES

Best for the first 100-250 customers and the most strategic anchor accounts.

CHANNEL PARTNERS

Needed to scale beyond founder bandwidth, especially in industrial clusters.

CLUSTER STRATEGY

Go deep in a few manufacturing regions before broad geographic expansion.

GROUP EXPANSION

One manufacturing group should become multiple factories, brands, or business units.

Suggested Geographic Priority Inside China

WAVE	REGIONS	WHY THEY MATTER	TYPICAL ENTRY MOTION
Wave 1	Shenzhen, Dongguan, Foshan, Guangzhou	dense export manufacturing, digital agencies, founder networks	founder-led sales + agencies + export consultants
Wave 2	Suzhou, Wuxi, Ningbo, Hangzhou	strong manufacturing base and better quality enterprise buyers	cluster events + B2B partner channels
Wave 3	Qingdao, Tianjin, Xiamen, Chengdu, Chongqing	regional expansion once playbooks are proven	replicable partner-led rollout

Funnel Math Needed to Support 5,000 Customers

TOP FUNNEL

- qualified pipeline must be far larger than raw lead volume
- case-study marketing should create trust before the first demo
- partner-sourced pipeline should rise materially after year 1

MID FUNNEL

- demo narrative must stay vertical-specific
- annual contract logic should be non-negotiable by default
- onboarding promise must be simple and believable

BOTTOM FUNNEL

- activation within 30-45 days should be treated as a board KPI
- renewal proof must start in month 2, not month 11
- group expansion should be planned at contract signature

Team Build by Stage

STAGE	SALES	PARTNERS	ONBOARDING / CS	PRODUCT / OPS	MAIN GOAL
0-50 customers	founder + 1-2 sellers	1 informal partner track	founder-led / manual	small product core	prove demand and packaging
50-250 customers	3-5 AEs / SDRs	1 partner manager	2-3 onboarding / CS	stronger ops tooling	build repeatability
250-750 customers	regional sales pods	formal channel motion	CS + renewal discipline	automation and reporting	scale without chaos
750-2,000 customers	mid-market structure	partner enablement team	implementation managers	process rigor	turn sales into rollout system
2,000-5,000 customers	national cluster coverage	multi-tier partner governance	renewal + expansion engine	board-grade finance/ops	protect ARR quality at scale

Critical KPI Gates

CHECKPOINT	MINIMUM	HEALTHY	INTERPRETATION
Month 6	50 customers	60-75 customers	packaging works and founder-led motion is credible
Month 12	250 customers	300+ customers	repeatable demand engine exists
Month 18	750 customers	850-950 customers	cluster and group expansion are working
Month 24	2,000 customers	2,200+ customers	scale phase is real, not just narrative
Month 30	3,500 customers	3,700+ customers	channel compounding and retention quality are visible
Month 36	5,000 customers	5,200+ customers	RMB 150M ARR reached or exceeded

Top Risks

1. Trying to sell to all manufacturers instead of one strong vertical first
2. Allowing a low-quality monthly pricing model to dilute cash discipline
3. Turning every customer into a custom service project
4. Weak onboarding causing low activation and future churn
5. Building partner channels too early without clear enablement and economics

Reality check: RMB 150M ARR at the current base price is not a “marketing campaign” outcome. It requires a true industrial growth machine with disciplined packaging, strong product operations, repeatable cluster GTM, and expansion-led account strategy.

Recommended Operating Sequence

1. NAIL ONE WEDGE

One use case, one vertical, one strong result narrative.

2. PROVE ROI

Turn the first 50 wins into visible case studies and repeatable trust assets.

3. BUILD CHANNELS

Use agencies, consultants, and cluster partners after the message already converts.

4. EXPAND GROUPS

Scale through multi-site and multi-brand rollouts, not just new single logos.

Document type: internal strategic roadmap. Base assumption: RMB 30,000 annual price per customer / factory in the China market. Suggested planning horizon: 36 months.
